The principle of the smart kick sensor tailgate is that the sensor at the bottom of the vehicle senses the kicking action in a specific area, thereby triggering the opening and closing of the electric tailgate. After it senses the vehicle is turned off through the sensor, you only need to kick the specific area at the bottom of the rear of the vehicle, and the tailgate will automatically open and close. Compared with the traditional button opening method, the smart induction trunk is more time-saving and labor-saving, and does not require hand contact, which greatly improves the comfort and convenience of use.
