According to this study, the global Intelligent Manhole Cover Management System (IMCS) market size will reach US\$ 128.9 million by 2030.

An intelligent manhole cover management system (IMCS) is one of the most important basic platforms in a smart city to prevent frequent manhole cover accidents. The system is comprised of a monitoring device that is attached to manhole covers, a data concentrator and a software platform.

A large number of manhole covers, which are widely distributed throughout the city, are hard to supervise. The loss or damage of manhole covers might influence the drainage facilities and pose a threat to the safety of pedestrians. The intelligent manhole cover management system (IMCS) can monitor manhole covers in real time, and if it detects an abnormal opening, it will transfer the data to the urban management monitoring network for instant action.
