The intelligent fire protection facility monitoring system is an information management system based on the Internet of Things, cloud computing, and data analytics. It enables real-time sensing, centralized monitoring, and intelligent analysis of various fire protection facilities within buildings and premises. By connecting to key fire protection facilities such as fire alarm control panels, fire hydrants, sprinkler systems, smoke extraction equipment, and electrical fire monitoring devices, the system continuously collects operational status, fault information, and environmental data to achieve online monitoring, anomaly warnings, closed-loop management of hazards, and traceability of responsibility. Its core value lies in upgrading the traditional fire management model, which relies on manual inspections, to an intelligent system of **real-time monitoring + data-driven + hierarchical supervision**. It is widely used in government fire supervision, urban public buildings, industrial parks, and large commercial complexes, serving as a key foundational platform in smart fire protection systems.
