The global Intelligent Pre-paid Water Meter market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Smart prepaid water meter is a water meter that combines modern microelectronics technology, modern sensor technology and smart IC card technology. It not only has the metering function of traditional water meters, but also realizes the prepaid management of user water charges. Users need to purchase water and store it in IC cards first, and then insert the card into the water meter for recharge and use. The water meter will automatically deduct the corresponding water fee according to the user's water consumption. When the balance is insufficient, the water meter will issue an early warning or automatically close the valve to ensure that users will not stop using water due to arrears.

The research process involved the study of various factors affecting the industry, including the government policy, market environment, competitive landscape, historical data, present trends in the market, technological innovation, upcoming technologies and the technical progress in related industry, and market risks, opportunities, market barriers and challenges.
