According to our LPI (LP Information) latest study, the global Intelligent Robotic Lawn Mowers 2.0 market size was valued at US\$ million in 2022. With growing demand in downstream market, the Intelligent Robotic Lawn Mowers 2.0 is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Intelligent Robotic Lawn Mowers 2.0 market. Intelligent Robotic Lawn Mowers 2.0 are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Intelligent Robotic Lawn Mowers 2.0. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Intelligent Robotic Lawn Mowers 2.0 market.

Traditional lawn mowers are divided into push lawn mowers and intelligent lawn mower robots. However, its intelligent lawn mowing robot is a wire-embedded type. The wire-buried lawn mowing robot needs to bury magnetic induction lines underground in advance, so that it can sense the magnetic induction lines and determine the area of the garden and the direction of mowing. The working principle of the wire-embedded lawn mowing robot is to move forward in one direction, hit the magnetic induction line and turn randomly or semi-planned to continue moving forward, and then repeat the above-mentioned collision and steering process. Not only is it expensive, it's also not smart. After Ecovacs entered the game, the intelligent lawn mowing robot entered the 2.0 era. The robot binocular vision solution consisting of a 360-degree panoramic camera and a

fish-eye camera follows the machine vision route, and is superimposed with UWB ultra-bandwidth wireless carrier communication technology, inertial navigation technology and GPS positioning technology, which can solve boundary sensing, precise positioning, Actively avoid obstacles and other pain points. It involves multiple technical routes such as 'RTK+ultrasonic', 'RTK+IMU+visual sensor', 'LiDAR+visual fusion', 'L4 level autonomous driving+visual fusion', etc. The market size of lawn mower robots continues to grow and has broad prospects. In European and American countries, due to relatively abundant land resources and high residents' living standards, the market demand for lawn mowers is strong. Coupled with the advancement of intelligent technology and the expansion of application scenarios, intelligent lawn mowing robots have gradually entered the public's field of vision. In addition, with the application of lithium battery technology, intelligent control technology, and sensor technology, intelligent lawn mowing robots solve the pain points of traditional lawn mowers. Intelligence can realize automatic obstacle avoidance, solve disordered mowing, cope with complex environments, formulate lawn care plans, etc., while the battery life and fast charging of lithium batteries can be applied to larger lawn scenes. Market demand is growing rapidly.
