The global Intelligent Sewage Pumping Station market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A sewage pumping station is an engineering facility used to pump and transport sewage in urban drainage projects. When the sewage in the sewage pipeline cannot be transported or discharged by gravity, or when the construction is difficult due to the deep burial of the general road, or when it is at the terminal of the main pipe and needs to be pumped up before it can enter the sewage treatment plant, a sewage pumping station must be installed. The sewage pumping station is an important part of the sewage system. It is characterized by continuous water flow and small water flow, but the change range is large, and the content of pollutants in the water is high.
