The global Intelligent Tubular Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Tubular motor is a specially designed motor with a tubular structure. This type of motor is usually composed of electromagnetic coils and rotating components, which generate force in the electromagnetic field through current and drive the rotating components to achieve power output. Tubular motors are commonly used for electric roller shutter doors. The motor is hidden inside the roller tube and drives the transmission shaft to rotate, achieving the lifting of the roller shutter. When it rises, the shutter is wound on the roller, and when it falls, it slides down along the inner side of the guide rail. The curtain can be raised, stopped, and lowered through the control of a remote control.
