Intelligent tutoring systems are intelligent teaching systems that integrate artificial intelligence, cognitive science, knowledge graphs, and big data analytics. They simulate the teaching logic of human teachers, providing learners with one-on-one, real-time, and personalized guidance.

Through automatically diagnosing learning weaknesses, dynamically adjusting teaching content, and providing instant feedback and guidance, they achieve precise tutoring without human intervention. This represents a core technological form of adaptive learning and personalized education.

The core components of an intelligent tutoring system include a domain knowledge module, a student model, a teaching strategy module, and an interaction module. Its key features include: one-on-one intelligent tutoring, replacing or assisting human teachers, real-time diagnosis of knowledge gaps, targeted explanations, automatic question generation, grading, analysis, and application of knowledge, continuous tracking of learning progress, and dynamic adjustment of difficulty.
