The global Intelligent Vapour Control Layer market size is predicted to grow from US\$ 976 million in 2025 to US\$ 1556 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

Vapour Control Layer (or Vapour Retarder) - these are permeable and are designed to allow a small amount of water vapour through from either direction (i.e from the room side and the structure side). Intelligent VCL - these are the latest VCL's and they open and close their pores depending on the weather conditions and temperature to provide the best option when using natural insulation materials.

Materials used in buildings are collectively known as building materials, which can be divided into structural materials, decorative materials and specialized materials. Structural materials include wood, bamboo, stone, cement, concrete, metal, masonry, ceramics, glass, engineering plastics, composites, etc.; decorative materials include a variety of coatings, paints, plating, veneers, various colors of ceramic tiles, glass with special effects, etc.; special materials are used for waterproofing, moisture-proofing, corrosion resistance, fire prevention, fire-retardant, acoustic, thermal insulation, heat preservation, sealing and so on. The building materials industry tends to develop towards ecological building materials, with the principle of saving resources and reducing environmental pollution, and realizing the easy recovery and recycling of building materials. Therefore, the development of building materials with the improvement of the living room ecological environment and health care functions, the development of alternative production of energy-consuming, environmentally polluting, toxic and harmful to the human body of building materials is the development of ecological building materials construction strategy, the construction industry will continue to explore around the new materials. New building materials include a wide

range of thermal insulation materials, heat insulation materials, high-strength materials and materials that breathe, etc. In 2022, the global green building materials market will be about 312.5 billion U.S. dollars.
