An Intelligent Parking Software Service is a software solution that incorporates IoT technologies such as sensing devices, cameras, or counting sensors to identify which parking area is occupied or available and often uses this sensor data to design a real-time parking map.

Such sensors communicate with the gateway and transfer the real-time data to the cloud. The availability of parking slots is then automatically demonstrated by vehicle detection sensors. It can also be seen on the software or app mounted on the available slots so that space can be quickly detected by the drivers.
