Interactive Parts Catalog Software is a digital platform that transforms complex product part information into a dynamic, visual query tool. It revolutionizes traditional paper or static PDF catalogs, enabling users to intelligently search and identify parts through an intuitive graphical interface. Its core function is to provide an interactive view. Users can click directly on a specific part on a component's 2D or 3D model, and the software will immediately highlight the part and simultaneously present key information such as its part number, name, technical specifications, inventory status, and price. This "what you see is what you get" approach greatly improves search accuracy and efficiency. Widely used in equipment maintenance, after-sales service, and supply chain management, the software significantly improves repair efficiency, spare parts ordering accuracy, and customer satisfaction by reducing search errors and downtime.
