An interchangeable biosimilar is a biopharmaceutical product that is similar to an approved reference biologic and has demonstrated equivalence in terms of quality, efficacy and safety. Interchangeable biosimilars may have minor differences in composition, quality, purity and biological activity compared to the reference biological drug, but these differences do not affect their efficacy or safety. Interchangeable biosimilars are generally considered to be effective alternatives to reference biologics and can be used interchangeably in clinical practice. These generics are often cheaper, thus providing patients with more therapeutic options.

The global Interchangeable Biosimilars market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
