Interior Acoustics Simulation Software is a professional engineering simulation tool designed based on acoustic theory, numerical calculation methods, and multiphysics coupling technology. Its core function is to digitally simulate the propagation, reflection, diffraction, absorption, and scattering behavior of sound fields in different media (gas, liquid, solid), complex geometries, and multiphysics environments. It quantifies key acoustic indicators such as sound pressure level, reverberation time, frequency response, and noise radiation, addressing engineering pain points such as acoustic performance prediction, noise control, and sound quality optimization. It provides scientific data support for product design, environmental optimization, and compliance verification, ultimately achieving synergistic optimization of acoustic performance, product functionality, and user experience.
