Abstracts

The global Interlayer Films for Automotive Laminated Glass market size is predicted to grow from US\$ 264 million in 2025 to US\$ 362 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2024, global interlayer films for automotive laminated glass production reached approximately 2874 k sqm, with an average global market price of around US\$ 90 per sqm. The interlayer films for automotive laminated glass is a layer of organic polymer material sandwiched between two or more layers of glass. It has been treated by high temperature and high pressure process and permanently bonded with glass. It is the core component of laminated glass to play the functions of safety, sound insulation and heat insulation.

The annual production capacity of interlayer film for automotive laminated glass is typically around 3 million square meters, with a gross profit margin of approximately 28%.

The downstream consumption of interlayer film for automotive laminated glass is as follows: passenger vehicles 70%, commercial vehicles 30%.

Market Concentration and Key Players:

Internationally, the market concentration degree of automobile laminated glass intermediate film is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Sekisui Chemical and Eastman and other large manufacturers; from the domestic point of view, there is still a lot of room for development of automotive laminated glass intermediate film.

Manufacturing Processes and **Market Trends:**

The core of the manufacturing process of the automobile laminated glass interlayer is to permanently bond the PVB and other polymer interlayer with the glass at high temperature and high pressure, and the key steps include lamination, pre-pressing exhaust and high-pressure molding. The temperature control in the pre-pressing exhaust stage is very important, and it is necessary to accurately set the viscous flow temperature according to the interlayer to ensure sufficient exhaust and no bubbles. For the wedge-shaped intermediate film with sound insulation function or suitable for a head-up display system, a precise multi-layer co-extrusion technology is adopted for manufacturing the wedge-shaped intermediate film, and the thickness gradient is controlled by designing a micro-wedge-shaped flow channel with a special angle, so that the problems of optical distortion and distribution uniformity of a functional layer are solved.

The current market trend shows that the intermediate membrane technology is moving towards the direction of functional compounding and aesthetic design. In terms of function, a single film layer can integrate sound insulation, heat insulation, ultraviolet protection and even embed conductive circuits to realize dimming, heating and other functions, meeting the higher demand of automobile for comfort and intelligence. In terms of design, innovative products such as gradient color and dark privacy film emerge as the times require, aiming to deeply integrate automobile glass with vehicle aesthetics and enhance visual integrity and luxury experience. In addition, new materials such as TPU interlayers show potential applications in high-end safety glass and intelligent electrochromic windows due to their higher light transmittance, impact resistance and weather resistance, indicating a more diversified material choice in the future. In general, the automotive laminated glass interlayer market is evolving continuously to meet the comprehensive upgrading needs of the automotive industry in terms of safety, intelligence, aesthetics and personalization.
