Laminated glass is a type of safety glass where two or more panes are bonded together to form a unit. Interlayers are used in this process to bond the two panes together when manufacturing this type of glass. This interlayer is often made from PVB (Poly Vinyl Butyral), but there are many other interlayers available. PVB is one of the oldest interlayers used in laminated glass. It is used widely to laminate glass used in the automotive industry. SGP (SentryGlas Plus) is another popular security interlayer used in laminated glass, with increased strength and security. EVA interlayers are high in moisture resistance and can be used in both external and internal glazed applications when the edges are exposed.
