The global Internal Coolant Hole Drills market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Internal coolant hole drills are specialized drilling tools that feature internal channels for coolant delivery. These drills have a central passage through which coolant can flow directly to the cutting edge, improving the cooling and lubrication of the drill bit and the workpiece. This is particularly useful in deep hole drilling operations where conventional external coolant application might not be effective. Internal coolant hole drills are commonly used in industries that require high-precision drilling, such as aerospace, automotive, and medical device manufacturing.
