The global Interphase Spacer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The main concept behind the application of interphase spacers is to prevent the most dangerous consequence from conductor galloping, namely phase-to-phase short-circuits. Attaining this is relatively straightforward and involves providing in-span mechanical couplings between phases, thereby maintaining phase-to-phase clearances at some pre-determined, acceptable limit. Moreover, from the oscillation damping point of view, these devices provide further benefit by limiting any torsional (twisting) motion of conductors or conductor bundles. Interphase spacers are applied to maintain constant distance between phases of an overhead line. The most frequent situations where these find application are where a line is exposed to strong winds and snowstorms that can generate ice sleeves on conductors.

United States market for Interphase Spacer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Interphase Spacer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Interphase Spacer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Interphase Spacer players cover PLP, K-Line Insulators Limited, Ribe, Rayphen, GD Powernet A/S, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
