A fluoroscopic imaging system includes an X-ray generator, a detector, and a control circuit coupled to the detector. The control circuit may be adapted to receive a digital signal from the detector, process the digital signal, and transmit the processed digital signal to the monitor for display during fluoroscopic imaging operations. The fluoroscopic imaging system may also include a user interface having at least one configurable adjuster configured to enable a user to adjust one or more imaging parameters affecting the digital signal during fluoroscopic imaging. The control circuit is adapted to set at least one of a range of the configurable regulator, a step size of the configurable regulator or a default value of the configurable regulator via the user interface based on input from the user.
