Interventional neurology refers to endovascular, catheter-based techniques using fluoroscopy and angiography to diagnose and treat vascular disease of the central nervous system. Neurointerventional procedures use imaging technology and are minimally invasive, meaning they can be accomplished through small incisions, rather than open surgery.

Only specific brain, neck and spine conditions can be treated with a neurointerventional approach. Strokes, aneurysms and spinal compression fractures are some of the most common conditions an interventional neurologist will treat.
