The global Intracavity Robot market size is predicted to grow from US\$ 1106 million in 2025 to US\$ 7530 million in 2031; it is expected to grow at a CAGR of 37.7% from 2025 to 2031.

Endovascular robots are a type of robotic system designed for intracavitary surgery, endoscopy, and treatment. These robotic systems are designed to increase surgical precision, reduce the trauma of invasive procedures, improve patient recovery time, and provide physicians with greater manipulation and visual control. These robotic systems are often controlled remotely by surgeons, helping to perform minimally invasive surgeries and reduce surgical trauma. One of the future trends of intracavity robots is to enhance their intelligence and autonomy. This may include more advanced perception technology, machine learning and artificial intelligence, allowing robots to more flexibly adapt to complex surgical environments. Typical products include Intuitive Surgical's da Vinci Surgical System, TransEnterix's Senhance Surgical System, and CMR Surgical's Versius Surgical System.
