The global Intracellular Cryoprotective Agent DMSO market size is predicted to grow from US\$ 63.59 million in 2025 to US\$ 86.30 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Cell-freezing grade DMSO is a high-purity dimethyl sulfoxide utilized for the cryopreservation of cells, tissues, and biological samples. Characterized by excellent permeability and the ability to mitigate ice crystal damage, it effectively safeguards cell membranes and preserves cellular viability. Consequently, it is widely employed in fields such as cell therapy, scientific research, and biobanking.

The upstream segment of the industry encompasses high-purity DMSO raw materials, rectification and purification processes, sterile filtration, endotoxin control, pharmaceutical-grade packaging materials, quality testing, and clean-room filling equipment. Downstream applications span diverse sectors, including cell therapy, stem cell banking, CAR-T therapy, vaccine R&D, biopharmaceuticals, scientific research laboratories, and hospital sample preservation.

Globally, the cell-freezing grade DMSO market commands an average unit price of \$130 per liter, with a global sales volume of approximately 500,000 liters. The industry's annual production capacity ranges from 550,000 to 650,000 liters, maintaining a profit margin of approximately 18%.

The global market for cell-freezing grade DMSO is projected to be driven in the future by growth in cell therapy, regenerative medicine, biobanking, and biopharmaceutical R&D. As the demand for the cryopreservation of CAR-T cells, stem cells, immune cells, and primary cells continues to rise, customer expectations regarding product sterility,

low endotoxin levels, low moisture content, batch-to-batch consistency, and regulatory compliance are becoming increasingly stringent. The market is expected to evolve from standard laboratory-grade DMSO toward higher-tier solutions?specifically GMP-grade, pharmacopoeia-grade, animal-origin-free, and ready-to-use cryopreservation kits. Concurrently, advancements in cold-chain logistics, the establishment of cell banks, and the development of personalized medicine will fuel the demand for high-quality cryopreservation reagents. Consequently, competition among suppliers will increasingly focus on core competencies such as purity control, robust quality management systems, comprehensive documentation support, supply chain stability, and biological safety validation capabilities.
