Abstracts

The global Intranasal Corticosteroids (INCS) market size is predicted to grow from US$ 976 million in 2025 to US$ 1291 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

In 2024, global intranasal corticosteroids production reached approximately 48 m units , with an average global market price of around US$ 20 per unit.Intranasal corticosteroids (INCS) are glucocorticoids administered topically through the nasal cavity, often in the form of nasal sprays. By acting on nasal mucosa, they exert powerful local anti-inflammatory and anti-allergic effects, which can effectively relieve the core symptoms caused by allergic rhinitis, such as nasal congestion, runny nose, sneezing and nasal itching. Because it is a local drug, the drug mainly acts on the nasal cavity and has little systemic absorption, so it is safe at the conventional recommended dose and systemic side effects are rare.

The annual production capacity of a single line of nasal corticosteroids is usually between 500,000 and 800,000 units per year, with a gross profit margin of around 40%.

United States market for Intranasal Corticosteroids (INCS) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
