Intraocular Lens (IOL) Delivery System is a medical device used to insert an intraocular lens into the eye during cataract surgery or refractive lens exchange procedures. This system typically consists of a cartridge that holds the folded or rolled IOL and an injector that facilitates the precise placement of the lens into the eye. The delivery system ensures that the lens is inserted safely and accurately into the capsular bag after the removal of the natural lens. It aims to minimize trauma to the eye, reduce the risk of complications, and improve surgical outcomes.
