Pain Management Applications:

Intrathecal therapy pain pumps are utilized for the management of chronic pain conditions, including cancer-related pain and severe neuropathic pain.

Implantation and Refill Procedures:

The market involves surgical implantation of the pump and subsequent refill procedures, which are performed periodically to ensure a continuous supply of medication.

Patient Convenience and Quality of Life:

These pumps contribute to improved patient convenience by providing a more targeted and efficient way of delivering pain medication, enhancing the quality of life for individuals with chronic pain.
