Hypothermia, a drop in body temperature, below 35 °C, can be caused due to accidental exposure, medical conditions, or could be on purpose as a part of therapy i.e., induced hypothermia. During vascular surgeries, Induced hypothermia is used for neurological protection, but a patient cannot deviate from normal body temperature for a longer time without risks. Thus, rewarming of patients is crucial. Intravascular warming systems are used to maintain normothermia i.e., normal body temperature which can lead to faster recovery.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is

continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
