The intravesical hyperthermia system is a non-invasive physical therapy for bladder diseases (such as cystitis and bladder tumors). The intravesical hyperthermia system uses high temperature to act on the bladder area, and through a series of biological effects, the tumor cells or inflammatory cells in the bladder are damaged. The physical factors of heating may include radio frequency, microwaves, etc., and the treatment route is usually through physiological cavities (such as the urethra).

United States market for Intravesical Hyperthermia System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Intravesical Hyperthermia System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
