Immunotherapy is a biologic therapy that activates the patient's immune system and triggers a response to fight cancer. For bladder cancer, a common immunotherapy after surgery is Bacillus Calmette-Guerin (BCG) Therapy. During BCG therapy, a catheter is used to fill the patient's bladder with the drug and remains there for roughly two hours. BCG therapy stimulates an immune system response to attack and kill cancer cells. Newer innovative, more selective and targeted immunotherapy agents are currently being tested at a handful of centers worldwide, including the University of Chicago Medicine.
