The global Intumescent Fire Strip market size is predicted to grow from US$ 904 million in 2025 to US$ 1136 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2024, global Intumescent Fire Strip production reached approximately 174,000 kilometers?with an average global market price of around US$ 5.2 per meter. Intumescent Fire Strip is a passive fire protection material designed to enhance the fire resistance of doors, windows, and other building elements by sealing gaps when exposed to high temperatures. It is typically manufactured from intumescent materials such as graphite, sodium silicate, or other proprietary chemical compounds that expand significantly when subjected to heat, usually starting at around 180°C to 200°C. Under normal conditions, intumescent fire strips remain slim and unobtrusive, fitted into grooves around fire doors, frames, or glazing systems. However, when exposed to fire, the strip rapidly expands to many times its original size, filling gaps and forming an insulating barrier that prevents the passage of flames, smoke, and toxic gases. This expansion helps maintain the integrity of the fire-rated assembly, giving occupants additional time to evacuate and emergency services more time to respond.

United States market for Intumescent Fire Strip is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Intumescent Fire Strip is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
