The global Intumescent Strip market size is predicted to grow from US$ 923 million in 2025 to US$ 1164 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2024, global Intumescent Strip production reached approximately 176000 kilometers, with an average global market price of around US$ 5.5 per meter. Intumescent strip is a passive fire protection material specifically designed to expand when exposed to elevated temperatures, thereby forming an insulating char layer that seals gaps and prevents the spread of flames, smoke, and hot gases. These strips are typically manufactured from graphite-based, sodium silicate-based, or phosphate-based compounds that undergo controlled expansion upon reaching activation temperatures, usually between 150°C and 250°C. They are widely integrated into fire-rated doors, glazing systems, partitions, and building joints to enhance fire resistance by maintaining structural integrity and compartmentalization during a fire. Intumescent strips are often encapsulated in PVC, thermoplastic, or resin carriers to improve durability, ease of installation, and aesthetic integration with architectural components. Their effectiveness lies in their ability to remain dormant under normal conditions but react rapidly and reliably under fire exposure, making them a critical element in modern passive fire safety strategies.

United States market for Intumescent Strip is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Intumescent Strip is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
