Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Inulin and Fructooligosaccharide market.

Inulin is a slightly sweet carbohydrate that has certain beneficial properties. It is classified as a fiber because it passes through the digestive tract without being metabolized until it reaches the colon. Unlike cellulose fiber (bran etc.) it is a soluble fiber. Inulin comes from a natural source and occurs in a large variety of plants, where it plays an important biological role as reserve carbohydrate. Inulin has been part of our daily diet for hundreds of years, as you find it in many fruits and vegetables, such as bananas, onions, and wheat. When extracted from chicory roots, inulin can be successfully used as a beneficial ingredient in many food applications.

A fructooligosaccharide (also written fructo-oligosaccharide) is a carbohydrate, which is

made out of a short chain of fructose molecules. Fructooligosaccharides is added to many processed foods, mainly as a prebiotic or fiber supplement but also as a sweetener. It is also classed as an oligosaccharide; oligo meaning few and saccharide, sugar. Fructooligosaccharides are also sometimes called oligofructose. Often the term is abbreviated to the letters FOS.

The industry's main producers are Beneo-Orafti, Tereos and Sensus, which accounted for 40.89%, 14.79% and 21.41% of revenues in 2019, respectively.
