The global Invar Alloy Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Invar alloy, also known as INVAR alloy, is an iron-based high-nickel alloy with a nickel content of up to 36%. This alloy has an extremely low coefficient of linear expansion at temperatures below 100°C, so it is called inflatable steel. As a material with excellent properties, Invar alloy's application fields will continue to expand. For example, in the energy field, it can be used to manufacture high-efficiency batteries and fuel cells; in the aerospace field, it can be used to manufacture high-temperature components and structural parts. In addition, Invar alloy can also be used in medical devices, electronic equipment, precision instruments and other fields.
