An invasive feeding tube is a medical device that is inserted into the body to deliver nutrition directly to the gastrointestinal tract or bypass it entirely. This type of feeding tube is typically used when a patient cannot ingest food orally due to conditions such as swallowing difficulties, surgery, or critical illness. Invasive feeding tubes can be placed through various methods, including percutaneous endoscopic gastrostomy (PEG) or nasogastric insertion, and they provide essential nutrients, fluids, and medications directly to the digestive system.

Fresenius Kabi, Cardinal Health and Nestle are the top 3 companies in global gastrostomy feeding tube (G-tube) market and account for about 40% of total market share. Geographically speaking, Americas holds about 35% of global market share, followed by APAC with about 30% share. In terms of type, low profile G-tube segment holds an important share of over 50%. In terms of application, over 60% of the gastrostomy feeding tube (G-tube) are for adult.
