Abstracts

The global Inverter Refrigerator Control Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

This report mainly studies the control board of the inverter refrigerator. The refrigerator electric control panel is the 'brain' of the refrigerator, controlling the compressor, fan and other main components. When the electric control board of the refrigerator fails, the refrigerator cannot cool normally. If the control panel relay of the starting compressor fails, it will not cool at all, which is the most common problem of the refrigerator control panel (other faulty components can prevent the operation of the control panel, such as the starting device or overload fuse).
