The global Iodine-based Polarizer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Iodine-based polarizers are optical elements that filter light based on its polarization state. They are made using iodine molecules embedded in a stretched polyvinyl alcohol (PVA) film. An iodine-based polarizer is a type of optical filter commonly used in various display technologies, such as Liquid Crystal Displays (LCDs). It selectively passes light waves that oscillate in a particular direction while absorbing or blocking waves oscillating in other directions.
