Iodine cotton balls are primarily composed of cotton balls and iodophor solution. They are mainly used for sterilization and disinfection and are generally disposable. When skin is wiped with iodophor cotton balls, the iodine component in the iodophor can disrupt the cell membranes, proteins, and other structures of microorganisms, thereby exerting a disinfecting effect. Meanwhile, the soft texture of the cotton balls can prevent mechanical damage to the skin, and their water-absorbing capacity ensures that the iodophor solution is evenly distributed over the wiped area.
