An intraocular lens (or IOL) is a tiny, artificial lens for the eye. It replaces the eye's natural lens that is removed during cataract surgery. IOLs come in different focusing powers, just like prescription eyeglasses or contact lenses. Most IOLs are made of silicone, acrylic, or other plastic compositions. They are also coated with a special material to help protect your eyes from the sun's harmful ultraviolet (UV) rays. An ophthalmologist measures the length of eye and the curve of cornea to set the focusing

power of the IOLs.
