Ion beam etching machine is a high vacuum single chamber ion beam etching system, which uses low energy parallel ar + The ion beam bombards the surface of the substrate and splashes the part of the substrate which is not covered by the mask, so as to achieve the purpose of selective etching. It is mainly used for etching metals, alloys, oxides, compounds, mixed materials, semiconductors, insulators, superconductors and other materials. The system is mainly composed of etching chamber, Kaufman ion source and power supply, water-cooled sample turntable, pumping system, vacuum measurement system, gas circuit system, electronic control system, etc.
