Ion chromatography system is a chromatography technology based on the principle of ion exchange, used to separate and detect ions and polar compounds in water, soil, biological samples, etc. The core of the ion chromatography system is the chromatographic column, which separates different ions through different ion exchangers and detects them through the detector.

Ion chromatography systems are used in a wide range of applications, including environmental monitoring, food safety, pharmaceutical analysis, chemical industry, energy and other fields. It can be used to detect anions, cations and organic acids in water, as well as harmful substances such as additives and pesticide residues in food. In addition, ion chromatography systems can also be used to study chemical reaction mechanisms, analyze the structure and composition of chemicals, etc.
