According to our LPI (LP Information) latest study, the global Ion-Exchange Chromatography market size was valued at US\$ 432.1 million in 2023. With growing demand in downstream market, the Ion-Exchange Chromatography is forecast to a readjusted size of US\$ 539.3 million by 2030 with a CAGR of 3.2% during review period.

The research report highlights the growth potential of the global Ion-Exchange Chromatography market. Ion-Exchange Chromatography are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Ion-Exchange Chromatography. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Ion-Exchange Chromatography market.

Ion exchange chromatography involves the separation of ionizable molecules based on their total charge. This technique enables the separation of similar types of molecules that would be difficult to separate by other techniques because the charge carried by the molecule of interest can be readily manipulated by changing buffer pH.

Clinical application of ion chromatography is in the rapid anion exchange chromatography technique used to separate creatine kinase (CK) isoenzymes from human serum and tissue sourced in autopsy material (mostly CK rich tissues were used such as cardiac muscle and brain). There has also been a growing interest in the

application of IC in the analysis of pharmaceutical drugs. IC is used in different aspects of product development and quality control testing. In Industry sector, it also has lots of applications.
