The global Ion Source Accelerated Neutron Generator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An ion source accelerated neutron generator is a compact neutron generator that seals the ion source, acceleration gap, target, etc. in a tube, and generates neutrons by accelerating charged particles (such as protons, deuterium, etc.) and bombarding the target nuclei. This device has a compact structure, small size, is easy to carry and use, and is a very practical neutron source.

Ion source accelerated neutron generators are widely used in basic research fields such as nuclear physics, experimental research fields such as neutron activation analysis and neutron protection, and industrial and agricultural production fields. For example, in oil exploration, neutron generators can be used for neutron logging to detect oil and gas resources in the formation; in the medical field, neutron generators can be used for neutron therapy to treat certain types of cancer.
