The global Ion Specific Electrode Meters market size is predicted to grow from US\$ 857 million in 2025 to US\$ 1167 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Ion specific electrode meters are instruments which measure ionic activity within a sample. Ion specific electrode (ISE) meters are millivolt meters which interface with ion selective electrodes (also known as specific ion electrodes [SIE]). These devices operate according to principles similar to those used by pH instruments; in fact, pH electrodes are simply ion selective electrodes which specifically respond to H⁺ ions within a solution.

The domestic market for testing and measuring equipment will be approximately RMB 20 billion in 2022, and the global testing and measuring equipment market will maintain rapid growth.
