The global Ionising BlowGuns market size is predicted to grow from US\$ 256 million in 2025 to US\$ 406 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Ionising BlowGuns is a handheld device used to eliminate static electricity, dust and contaminants from the surface of objects. It looks like a pistol, usually equipped with a trigger, and the emitter is mostly made of corrosion-resistant titanium. The ion air gun neutralizes the static charge on the surface of the object by emitting a balanced ion flow of positive and negative ions, thereby reducing the risk of electrostatic discharge (ESD). At the same time, it uses compressed air or nitrogen to blow ions onto the surface of the object, which can effectively blow away dust and other contaminants. It is widely used in electronics manufacturing, pharmaceuticals, automobile manufacturing and other industries. It can clean the surface of parts before assembly, spraying, packaging and other processes to protect precision parts from static damage.

The core technology of Ionising BlowGuns is continuously optimized, the efficiency of high-voltage electric fields is improved, and energy consumption is reduced to meet the needs of high-precision manufacturing. The integration of Internet of Things (IoT) and AI technology has become a trend, which can realize remote monitoring and adaptive adjustment, allowing users to manage and use equipment more conveniently.

In order to meet the needs of different industries and customers, products will develop in a diversified direction, and there will be products with different powers, shapes, and application scenarios to adapt to the precision operations in electronic manufacturing, or large-scale static elimination in large-scale industrial production.

The high requirements for static control in the lithium battery manufacturing process in the new energy industry have promoted the growth of the ion air gun market, and the

demand for static elimination in sterile environments in the medical and precision instrument fields has gradually emerged.
