The global IoT-Assisted Crop Monitoring market size is predicted to grow from US\$ 2910 million in 2025 to US\$ 7440 million in 2032; it is expected to grow at a CAGR of 14.6% from 2026 to 2032.

IoT-Assisted Crop Monitoring refers to the process of using Internet of Things (IoT) technology to monitor and manage the growth conditions of crops in real-time. Such systems typically include sensors, cameras, drones, and other devices that collect environmental parameters (e.g., soil moisture, temperature, light intensity, air quality) and crop growth data. The data is transmitted to the cloud or local servers for analysis and processing. Farmers or managers can remotely monitor crop conditions via smartphones or computers, allowing them to adjust irrigation, fertilization, and other agricultural practices promptly to enhance crop yield and quality while reducing resource waste.
