The global IoT Bluetooth Gateway market size is predicted to grow from US\$ 1196 million in 2025 to US\$ 2646 million in 2032; it is expected to grow at a CAGR of 12.2% from 2026 to 2032.

An IoT Bluetooth Gateway is a device that acts as a bridge between Bluetooth-enabled devices and the internet, allowing for communication and data transfer between the two. This gateway collects data from Bluetooth devices, such as sensors or beacons, and sends it to a cloud-based platform for analysis and storage. It enables seamless connectivity and integration of Bluetooth devices into IoT networks, providing a way to monitor and control various devices remotely. The gateway plays a crucial role in enabling the Internet of Things ecosystem to function efficiently and effectively.

Driven by the increasing demand for smart devices and automation, as well as the development of edge computing and the emphasis on network security, the market scale of IoT Bluetooth gateways is expected to increase. North America and Europe have advanced technological infrastructures and strict data protection laws, so they are in a leading position in the adoption of IoT gateway technologies. The Asia - Pacific region is growing rapidly due to the acceleration of industrial automation and the promotion of smart city projects, especially in China, Japan, and South Korea.

The continuous growth of the smart home market, driven by the increasing popularity of smart devices such as smart speakers, thermostats, and security cameras, has led to a rising demand for Bluetooth gateways to achieve device interconnection and remote control. The smart security field also has a high demand for IoT Bluetooth gateways. Gateways can connect various security sensors and cameras to enable real - time monitoring and alerting. With the enhancement of people's security awareness and the

development of smart city projects, the application of Bluetooth gateways in smart security is expected to increase. In addition to smart homes and smart security, IoT Bluetooth gateways also have applications in smart wearables, smart agriculture, smart supermarkets, and other fields. For example, in smart agriculture, gateways can collect data from sensors in the field to help farmers manage crops more scientifically.
