The report requires updating with new data and is sent in 48 hours after order is placed.

According to our LPI (LP Information) latest study, the global IoT Edge market size was valued at US\$ million in 2023. With growing demand in downstream market, the IoT Edge is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global IoT Edge market. IoT Edge are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of IoT Edge. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the IoT Edge market.

IoT Edge solves a fundamental problem associated with the centralization of cloud architecture. While clouds are powerful for storage and processing, they create delays for IoT devices sending data back and forth. By bringing cloud computing capabilities to local devices, IoT edge computing can process data faster, preventing delays, security breaches and other concerns.

Local processing supports real-time business systems and alerts, and it manages the data sent back to the cloud. An IoT Edge device meets the needs of the larger IoT platform while also bringing decision-processing local by eliminating the roundtrip time required for cloud processing. (Cisco)

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
