The IoT Facility Management System is an intelligent management platform based on IoT technology. Through sensor networks, communication protocols, and data analysis technologies, it enables real-time perception and dynamic optimization of buildings, equipment, and infrastructure. The system integrates physical equipment and digital systems, using RFID, GPS positioning, and environmental sensors to collect diverse information such as equipment operating status, energy consumption data, and space occupancy, and transmits it to a cloud or local management platform via wired/wireless networks. Its core functions include real-time monitoring and early warning, predictive maintenance, energy optimization, space management, and asset location. The system uses digital twin technology to build virtual models, support simulation analysis, and decision-making optimization, while integrating AI algorithms for automated control, improving facility operating efficiency, reducing O&M costs, and promoting sustainable development goals. The system has become a key infrastructure for the transformation of modern facility management toward intelligent, data-driven operations.
