The Production is about 450 k kits. IoT Learning Kit is a comprehensive educational toolkit designed to teach the principles and applications of the Internet of Things (IoT). It typically includes hardware components such as sensors, actuators, microcontrollers, and connectivity modules (Wi-Fi, Bluetooth), as well as software resources for programming and system integration. The toolkit is customized for hands-on learning and allows users to build IoT projects in areas such as smart homes, industrial automation, and environmental monitoring. It supports a variety of programming platforms (e.g., Arduino, Raspberry Pi, Python) and often integrates cloud-based data analytics and remote control capabilities. Widely used in schools, universities and vocational training programs, the IoT Learning Box provides a practical approach to mastering IoT technologies.

1. Upgrade to integrated training platforms IoT teaching kits will evolve from simple sensor kits into full-stack systems including gateways, cloud platforms, edge computing, and application development environments covering the entire IoT architecture.
2. Integration with AI and edge computing Future experiment boxes will include AI acceleration and edge analytics capabilities for computer vision, voice recognition, and predictive maintenance, supporting AIoT education.
3. Cloud-based and remote laboratories Cloud connectivity will enable students to remotely access devices, collect real-time data, and perform programming and

debugging, supporting distance learning and shared lab resources.

4. Standardized curriculum integration Teaching kits will align with certification programs and engineering education standards, offering modular courses from basic training to advanced project development.

5. Industry-oriented practical training Applications will expand to smart city, industrial IoT, smart manufacturing, and connected vehicle scenarios, improving hands-on skills and employability.
