According to our LPI (LP Information) latest study, the global IoT and Blockchain market size was valued at US$ million in 2023. With growing demand in downstream market, the IoT and Blockchain is forecast to a readjusted size of US$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global IoT and Blockchain market. IoT and Blockchain are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of IoT and Blockchain. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the IoT and Blockchain market.

Blockchain technology’s core component is a technology protocol that enables data to be exchanged among multiple parties within a network. It does so without the need for intermediaries as network participants interact with encrypted identities (anonymously) and directly with each other using peer-to-peer communication.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply
