The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The IoT Network Module is a module that provides network connectivity on IoT devices. It has low power consumption and supports protocols such as NB-IoT and Lora, etc. IoT modules are compact devices that integrate necessary components such as sensors, processors, communication interfaces, and power management circuits to enable connectivity and functionality within IoT systems. These modules are designed to simplify the development and deployment of IoT applications by providing a ready-made platform with standardized interfaces and protocols.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
