The global IoT Process Automation Solutions market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Process automation solution is the use of solution specifically designed for control of robotics in a factory or plant. Such software is used to automate tasks that were originally done by people. The use of robotics automation in manufacturing has both advantages and disadvantages when compared to special-purpose machinery. For short manufacturing runs, the more expensive and slower automated robots are the preferred choice. They can be quickly adapted to nearly any task, and then cheaply re-adapted later for future work. For long mass manufacturing runs, highly custom one-off machinery is preferred as these are designed and highly optimized to perform a specific task at the lowest per-unit cost.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
